PROFILE

Product Designer focused on creating **simple, useful and scalable digital experiences** that solve real user problems and support business goals. Experienced in designing web and mobile products across **logistics, import/export, procurement, payments, e-commerce, health and wellness, and SaaS**.

I specialise in taking complex workflows and turning them into clear user journeys from **shipment creation and tracking to procurement, sourcing, payment, KYC, subscriptions and business dashboards**. My process combines user-centred thinking, UX strategy, information architecture, interaction design, visual design, prototyping and design systems.

Proficient in **Figma, Auto Layout, Variables, Components, Prototyping and Design Systems**, with working knowledge of HTML, CSS, JavaScript and React. Comfortable collaborating with **product managers, developers, QA and business stakeholders** to take ideas from requirements to high-fidelity designs and developer-ready handoff.

I bring a strong balance of **product thinking, visual craft, problem solving and business understanding**, with a focus on reducing friction, improving usability and creating consistent experiences that are practical to build and easy to use.. Experienced working with cross-functional and distributed teams in remote and international settings. Holds a B.Sc. in Biochemistry, bringing analytical thinking and structured problem-solving into product design.

WORK EXPERIENCE

UI/UX Designer Oct/2023 – Present
African Import Export Solutions Lagos State

- Led the design and continuous improvement of scalable **web and mobile products** across logistics, international trade, procurement, payments, SaaS-style services, and enterprise operations.
- Designed complex end-to-end experiences across **shipment management, procurement and sourcing, payment automation, KYC, 2FA, subscriptions, account settings, Admin Dashboards, Partners Dashboards, and customer facing workflows**, simplifying complex business processes into intuitive user journeys.
- Improved **product usability and information architecture** across dashboards and operational workflows by simplifying navigation, tables, filters, status tracking, and data presentation, contributing to an estimated **30–40% faster task completion** and approximately **25% fewer user errors**.
- Designed and refined **customer facing and internal enterprise experiences**, balancing user needs, business requirements, operational processes, and technical feasibility to create practical and scalable product solutions.
- Built reusable **Figma components, design patterns, prototypes, and scalable design structures**, contributing to an estimated **20%+ improvement in design to development efficiency** and greater consistency across the product.
- Collaborated closely with **Product, Engineering, QA, Operations, and Business stakeholders** to translate requirements and user needs into high fidelity designs, interactive prototypes, and developer ready experiences.
- Contributed to the **full redesign of the mobile application**, currently improving key customer journeys, navigation, usability, visual consistency, and the overall mobile experience.
- Achieved a **KPI score of 86.60/100** during the initial two-month performance period and improved to **88.05/100 within the following month**, demonstrating consistent performance, growth, and contribution to product design objectives.

UI/UX Designer 06/2025 – 08/2025
MyMind Remote

- Designed **MyMind**, a mental wellness digital platform focused on creating a simple, accessible, and user centred experience for connecting patients with mental health professionals and supporting ongoing care.
- Led the end to end product design process, from **problem definition and user flows to information architecture, wireframing, high-fidelity UI design, prototyping, and design refinement**.
- Designed experiences for multiple user types, including **patients, physicians, and administrators**, ensuring each role had clear workflows, relevant information, and appropriate functionality.
- Designed the **patient-facing web and mobile experiences**, simplifying key journeys such as accessing care, managing personal information, viewing relevant information, and interacting with the platform.
- Designed **physician and administrative dashboards** to support professional workflows, patient management, information access, and operational activities while maintaining a clear and efficient interface.
- Established a consistent **design system and reusable UI patterns** across the platform, improving visual consistency, scalability, accessibility, and ease of future product expansion.
- Applied strong **information architecture and interaction design principles** to organise sensitive and complex information into clear, easy to navigate experiences while reducing unnecessary cognitive load.
- Created responsive designs and interactive prototypes for **desktop and mobile experiences**, ensuring consistency across different devices and screen sizes.
- Used **user centred design principles, usability thinking, and iterative design** to identify potential friction points and refine workflows before development.
- Balanced **user needs, accessibility, business requirements, and technical feasibility** when making product and interface decisions, creating a practical experience that could scale beyond the initial product scope.
- Produced detailed **developer ready designs and prototypes** to communicate interactions, component behaviour, layout, and user flows clearly throughout the product development process.

EDUCATION

National Youth Service Corps (NYSC) 07/2022 – 07/2023
Lagos

B.Sc. in Biochemistry 2016/2017 – 2022
Rivers State University, Nigeria Port Harcourt
Graduated: 2022

SKILLS

Analytical & Problem-Solving Skills

Human Centered Innovation & Digital Thinking

Design Tools
Figma, Framer, Adobe XD, Sketch, Canva

Prototyping
Figma, InVision

Research
User Surveys, Personas, Journey Maps

UI/UX Design
Wireframes, High-Fidelity Screens, Design Systems, Responsive & Accessible Design

Tools & Workflow
Notion, Trello, Miro, Webflow

No-Code & Web

- WordPress
- ClickFunnels
- Kajabi

PROJECTS

Logistics dashboard
